Slip Ratings Overview – AS/NZ 4586:2013 Standard

- Ratings are from AS/NZS 4586:2013 Slip resistance classification of new pedestrian surfaces
- Interpreted from Standards Australia Handbook 198. This handbook provides the minimum wet pendulum test (P rating) or oil inclining platform test (R rating) classifications that are deemed to satisfy specific applications.
- The industry standard is the wet pendulum test (P ratings). There is no requirement to test under both criteria.

Internal / Undercover Spaces	Examples	Slip ratings (wet pendulum test)		
		P1	P2	P3
Dry areas appropriate control measures ensure an area remains dry & clean when in use	Separate shops inside shopping centres Supermarket aisles (except Fresh Fruit areas)			
Transitional areas intended to be kept dry. A general exposure to water must be maintained in a dry clean condition by a facilities manager.	Entry & access areas: hotels, offices, public buildings etc. Hotel apartments, kitchens & laundries			
Wet areas may be either constantly or intermittently wet or otherwise contaminated	Entry & access areas: hotels, offices, public buildings etc. Shop & Supermarket aisles (including Fresh Fruit areas) Fast food outlets, food courts, dining areas in Shopping centres Toilet facilities in offices, hotels & shopping centres Undercover concourse areas of sports stadium. Undercover car parks Serving areas behind bars in public hotels & clubs, cold stores & freezers. Undercover loading docks. Commercial Kitchens			

¹ Conformability is determined by ink type, not all UV cured inks are conformable, please refer to the appropriate ICS Warranty Durability Bulletin for conformability performance
² Based on vertical exposure in Zone 2 with ICS qualified inks and printers. Please see ICS Performance Guarantee for full terms & conditions (graphicsap.averydennison.com/en/home/services/warranty.html)
³ Where the material is applied in a 'marine environment', the stated warranty period will be reduced by 40%.
